August 22, 2017

Get Your Hands on the Keyboard
Defend or Attack Healthcare

August 23, 2017

Table Top Exercise Cyber Incident Response
Healthcare Data is Always a Target

August 22, 2017

Start Time: 8:30 – 4:30

Target Audience: IT staff, IT security practitioners, Cybersecurity students (max number of hands on attendees 60).

Core Security's Capture the Flag cyber-range is designed around a rich and fictional, yet realistic, healthcare organization: Mercy Tech Healthcare. Filled with a complete, functioning infrastructure, including novel simulated medical devices, participants will have to opportunity to engage in instructor led tactical missions involving both offensive and defensive techniques.

The Capture the Flag is an excellent opportunity to safely practice techniques in a "cyber range" and to develop and hone skills using a variety of tools, including Core Security's Impact Pro Software.

Laptops will be provided or participants may bring their own. Laptop must be capable of connecting to a wireless network and connecting to a Microsoft Remote Desktop Services Connection.

Participants can receive 8 CPEs

August 23, 2017

Start Time: 8:30 – 4:30

Target Audience: Cybersecurity response staff, IT managers, Executives responsible for data breaches, Public Affairs staff. (max attendees 60)

Healthcare data is always a target! Work through cyber incident response topics that surround Healthcare data. Consider multi-layered impacts, resources, communications and who you are bringing to the party. How do entities handle a breach or advanced persistent threats (APTs)?

What response options are there to address an issue during discovery, response, or recovery? Do you know where your data is? What tools can you bring to bear? Who are your partners?

Walk through some of these questions and better understand what current plans address well and what may need to be improved.
